Hi,

First - thank you so much for joining the course. I look forward to being a part of your journey to become a senior software developer. I hope you've been able to get started already with some of the video content.

If you haven't already, make sure to **join the private student community on** Discord. You can find **step-by-step instructions** on how to join the community **in the course lesson called "Student Community"**. I've also attached the instructions **at the end of this email**. I'm looking forward to seeing you there. 😊

Finally, feel free to **leave comments and feedback** below the course lessons or on Discord. This truly helps me make the course better for everyone.

Good to know: since you have **lifetime access**, you'll be able to access any updates or improvements I make in the future, at no charge.

Thanks again for enrolling - and enjoy the experience!

To login to the course hosting platform, just follow this link: https://academy.arjancodes.com/login

- Arjan

How To Join The ArjanCodes Discord Student Community

Step 1

If you haven't done so already, join the ArjanCodes Discord server as a member. You can join the server using this invitation link. After logging in and choosing a user name, you'll be a part of my free Discord community.

Step 2

When you're in Discord, go to the *#bot_commands* channel (it's under the *Discord bot* category), and post the following command there (including the dash!):

-enroll_student_community 7656255

This automatically assigns the *student* role to you, which gives you full access to the community.

If this doesn't work for some reason, let me know by replying to this email and make sure to **mention your full Discord username**. I'll then add you to the community manually.
